# Team Contract

CS/SE 4AL3

Group 77

Justin Kwinecki, Zayed Umer, William Pol

Fall 2026

**Team mission:** We will design, implement, and evaluate an interpretable machine learning pipeline that predicts NFL pre-snap defensive coverage from tracking data, with reproducible experiments, fair workload distribution, and on-time milestones.

**Roles, duties, and expectations:**

- **Justin Kwinecki:** Feature engineering and modeling: represent defensive alignments in ways that expose coverage clues and work with Zayed on selecting model.
- **Zayed Umer:** Modeling and evaluation: train classifiers, tune them, and determine which coverages can be predicted reliably.
- **William Pol:** Data engineering: ingestion, line-of-scrimmage normalization, auditing and cleaning, game-based splits.
- Everyone reviews each other's work, helps where needed and works on milestones together.

**Leadership and coordination:**

- **Meetings:** weekly, 45 minutes, Mondays at 5:00 PM on Discord or in person. Facilitation rotates each week.
- **Tracking:** shared GitHub repository, with work tracked through Issues and feature branches.
- **Review:** no pull request is merged into `main` without approval from at least one other member.

**Communication and conflict resolution:**

- **Disagreements or workload imbalance:** hold an informal meeting to discuss and rebalance tasks.
- **Missed deadline without notice:** a written recovery plan within 48 hours.
- **Unresolved:** if a member is unresponsive for more than 72 hours or a conflict cannot be resolved internally, we contact the TA and instructor with our Git history and meeting notes.
